 - Intrinsic harvest capacity well beyond 500k GWT
- Quarterly dividend of NOK 1.40 per share in dividend (NOK 1.00 ordinary and NOK 0.40 extraordinary), payable in the first quarter
 - 70% of underlying EPS

Appendix

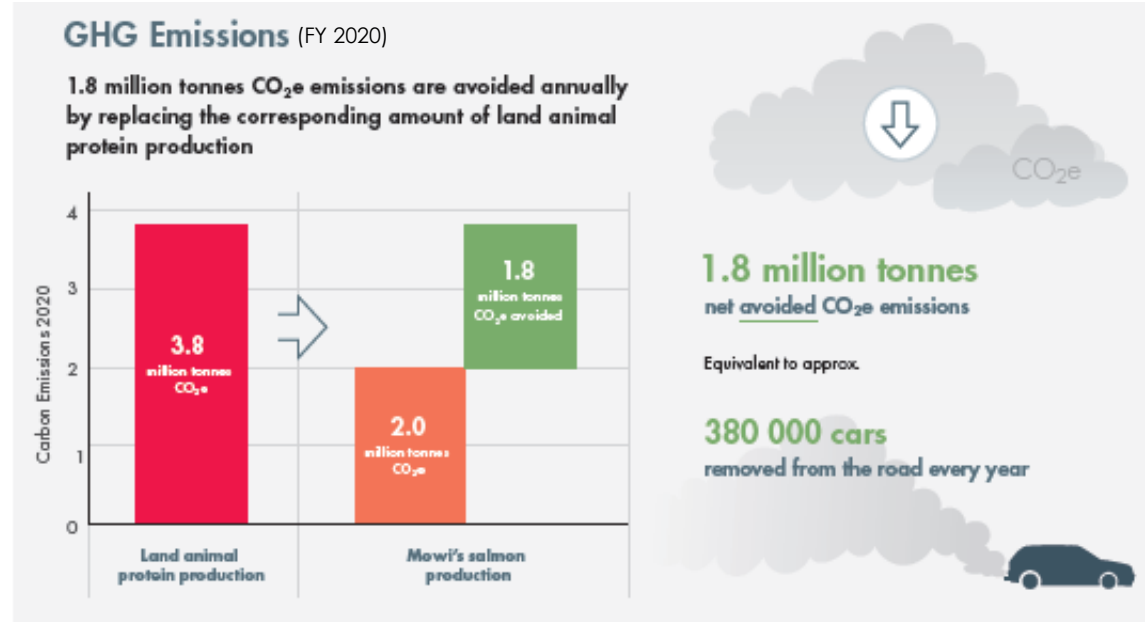

Mowi ranked #1 on sustainability amongst food producers

Good progress on reducing GHG emissions in 2021 and ambitious long-term targets

Scope 1 & 2 GHG emissions

Scope 1 & 2 & 3 GHG emissions

Our sustainability achievements

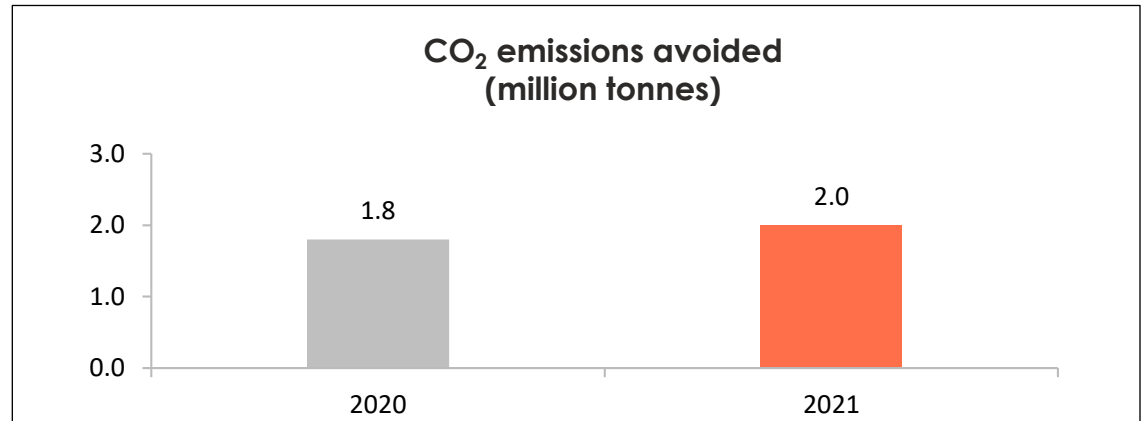

98% of harvest volumes are certified sustainable

100%⁽¹⁾ compliant with sustainable sourcing feed policy

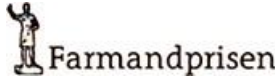

93%⁽¹⁾ of our marine sites with minimum benthic impact

(1) 2020 data

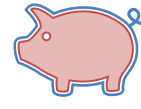

Note: The carbon footprint used for land based animal production was calculated by starting to convert the production volumes of Mowi salmon in 2020 to edible yield (using a 55% conversion), then calculating the carbon footprint of that volume originating from animal protein mix. This was done by using a mix of consumption (OECD, 2019) of 40% chicken, 38% pork and 22% beef and the reported GHG emissions from SINTEF 2020. www.epa.gov/energy/greenhouse-gas-equivalencies-calculator was used to convert the net CO₂e emissions resulting from replacing land based protein by Mowi salmon, to number of cars that can be removed from the road every year

Ocean-based Atlantic salmon farming is on the right side of sustainability

Rating agencies	About the rating	Score (1)

«Blue foods on average have much greater nutritional benefits than terrestrial foods. Many blue foods also have a smaller environmental footprint.»

«Farmed salmon...performed similarly or better than chicken – often considered the most efficient terrestrial animal across the considered environmental stressors.»
